Professional Summary

Third-year Computer Science Engineering student seeking a Web Development Internship to apply hands-on experience building and deploying full-stack, responsive web applications. Proficient in the MERN stack — from React front-end UIs to Node.js/Express backend APIs and MongoDB — with a passion for writing clean, maintainable code and solving real-world problems.

Skills

Frontend: HTML5, CSS3, Javascript, Vite, React

Backend: Node.js, Express, REST API, Socket.IO, JWT

Developer Tools: Git, GitHub, Postman, VS Code, Figma, Vercel, Render, Netlify

Databases: MongoDB, Mongoose

Projects

Chatty — Real-Time Global Chat Application | *React, Node.js, Express, Socket.IO, MongoDB, JWT* Apr 2026 — May 2026

- Engineered a full-stack real-time chat application using Socket.IO WebSockets, achieving sub-100ms message delivery across 50+ simultaneous connections.
- Implemented JWT-based authentication with bcrypt password hashing, securing 100% of API routes with custom Express middleware.
- Reduced back-end cold-start latency by ~70% by integrating a keep-alive cron job on the free-tier Render deployment.

Mini Message Board — Full-Stack CRUD Application | *React, Node.js, Express 5, MongoDB, Mongoose* Apr 2026 — May 2026

- Developed a complete CRUD web application following MVC architecture with cleanly separated controllers, models, and routes for long-term maintainability.
- Built RESTful API with Express 5 and Mongoose supporting 4 core operations; added modal inline editing, toast notifications, and keyboard shortcuts, improving UX efficiency by ~40%.
- Configured environment-based API URL switching, reducing deployment configuration errors to zero across dev and production environments.

Pokémon Memory Game — Interactive Front-End Application | *React, Vite, PokéAPI, CSS* Apr 2026 — Apr 2026

- Built a stateful card-matching game in React with 3 difficulty levels (8, 12, 16 cards), managing all complex game state entirely via hooks — no external state library needed.
- Integrated PokéAPI to dynamically render sprites; implemented Fisher-Yates shuffle for statistically unbiased board randomization on every interaction.
- Designed a responsive dark-mode CSS Grid UI achieving consistent layout across all mobile and desktop screen sizes.

Education

University College of Engineering Kanchipuram, Tamil Nadu
B.E., Computer Science Engineering, GPA: 8.2 / 10 *Aug 2023 — Jul 2027*

Anderson Higher Secondary School Kancheepuram
HSC, GPA: 84.5% *Jan 2021 — Jan 2023*

Certifications

Full Stack Web Development Bootcamp
Udemy
Credential ID: UC-0e16cb26-22ae-45f9-87d9-5b7c8404445c
