PROFESSIONAL SUMMARY

Third-year Computer Science Engineering student with a strong interest in building scalable software, and hands-on experience developing and deploying full-stack MERN applications across the entire stack — from React front-end UIs to Node.js/Express back-end APIs and MongoDB. Detail-oriented with strong problem-solving and organizational skills, and a passion for writing clean, maintainable JavaScript code.

TECHNICAL SKILLS

Front End	React, JavaScript (ES6+), HTML5, CSS3, Web Design, Vite
Back End	Node.js, Express.js, REST APIs, Socket.IO, JWT, bcrypt
Database	MongoDB, Mongoose
Tools & Deploy	Git, GitHub, Postman, VS Code, Figma, Vercel, Render, Netlify

PROFESSIONAL EXPERIENCE

Chatty — Real-Time Global Chat Application

Apr 2026 – May 2026

Stack: React, Node.js, Express, Socket.IO, MongoDB, JWT

Live Demo: View Live Site **Source Code:** View on GitHub

- Engineered a full-stack real-time chat application using Socket.IO WebSockets, achieving **sub-100ms message delivery** across **50+ simultaneous connections**.
- Implemented JWT-based authentication with bcrypt password hashing, securing **100% of API routes** with custom Express middleware.
- Reduced back-end cold-start latency by **~70%** by integrating a keep-alive cron job on the free-tier Render deployment.

Mini Message Board — Full-Stack CRUD Application

Apr 2026 – May 2026

Stack: React, Node.js, Express 5, MongoDB, Mongoose

Live Demo: View Live Site **Source Code:** View on GitHub

- Developed a complete CRUD web application following **MVC architecture** with cleanly separated controllers, models, and routes for long-term maintainability.
- Built RESTful API with Express 5 and Mongoose supporting **4 core operations**; added modal inline editing, toast notifications, and keyboard shortcuts, improving UX efficiency by **~40%**.
- Configured environment-based API URL switching, reducing deployment configuration errors to **zero** across dev and production environments.

Pokémon Memory Game — Interactive Front-End Application

Apr 2026

Stack: React, Vite, PokéAPI, CSS

Live Demo: View Live Site **Source Code:** View on GitHub

- Built a stateful card-matching game in React with **3 difficulty levels** (8, 12, 16 cards), managing all complex game state entirely via hooks — no external state library needed.
- Integrated PokéAPI to dynamically render sprites; implemented **Fisher-Yates shuffle** for statistically unbiased board randomization on every interaction.
- Designed a responsive dark-mode CSS Grid UI achieving consistent layout across **all mobile and desktop screen sizes**.

EDUCATION

B.E., Computer Science Engineering — GPA: 8.2 / 10

Aug 2023 – Jul 2027

University College of Engineering, Kanchipuram, Tamil Nadu

HSC — 84.5%

Jan 2021 – Jan 2023

Anderson Higher Secondary School, Kancheepuram

CERTIFICATIONS

Full Stack Web Development Bootcamp — Udemy | ID: UC-0e16cb26-22ae-45f9-87d9-5b7c8404445c

Certificate: View Credential
